

Addendum 3.

Image Acquisition Worksheet

Part A: Completed by Ultrasonographer

We would appreciate your feedback regarding your experience with two different ultrasound examination techniques used for assessing the eye. Your responses will help us understand how to improve our exams and provide the best care for patients presenting with ocular complaints.

Were you able to obtain adequate images / clips of each of the following structures?	Gel + Tegaderm Method		Water Bath Method	
	Left	Right	Left	Right
Anterior Chamber				
Lens				
Posterior Chamber				
Optic Nerve				
Optic Nerve Sheath Diameter				
Retrobulbar Area				
<p>How would you grade your scan:</p> <p>1 - Poor; image quality is poor, and interpretation is significantly compromised or not possible.</p> <p>2 - Fair; image quality is reduced, and interpretation is moderately compromised.</p> <p>3 - Good; image quality is acceptable, but interpretation is mildly affected.</p> <p>4 - Very Good; image quality is very good with negligible impact on interpretation.</p> <p>5 - Excellent; image quality is excellent with no impact on interpretation.</p>				

Part B: Completed by Investigator

	Gel + Tegaderm Method		Water Bath Method	
	Left	Right	Left	Right
Start Time				
End Time
